Wiring diagram

The IT700 is a wireless ZigBee thermostat which controls the pre-paired WZ600 Zigbee Wi-Fi Receiver, which has a single channel relay. It is the coordinator of the network, allowing devices to join the network and managing them thereafter.

Pairing Process

Note:The thermostat and the receiver arrive pre-paired from the factory. In case you need to pair again, please follow the steps below:

THERMOSTAT FUNCTIONALITIES:

First power up sequence

Operating modes

1. Changing from Manual mode to Schedule mode

2. Standby mode

STANDBY mode is a special setpoint temperature which can be activated/deactivated in any time. It can work like a frost protection or overheating protection when needed. When standby mode is activated, the clock continues running (although it is not displayed), and the temperature sampling also continues. To enter **STANDBY mode** hold the button for 3 seconds on your thermostat. You can always turn off **STANDBY mode** by holding the button for 3 seconds again.

3. Schedule mode

There are 3 possible schedule options. Use or buttons to select schedule variant and confirm by button

Schedule programming example for the **WHOLE WEEK** variant:

After setting the schedule thermostat is working in schedule mode. You can see calendar icon on the display:

*Default schedule in Offline mode

7 days (Monday to Sunday)		
Program	Time	Temperature
1	6:00	21 °C
2	23:00	19 °C

Heat / Cool Selection
